NEW QUESTION: 1

Which two statements are true regarding request set stages? (Choose two)

- A.** Stage status is treated as Error if at least one request completes with Error.
- B.** Stages are executed by the concurrent manager on the basis of how they are linked, and not by the sequence number assigned to them.
- C.** Stages can complete with two statuses, Complete or Error.
- D.** Stages in a request set can be run in parallel.

Answer: A,B

Explanation:

C: The Standard function sets the stage status to Success if all of the requests in a stage complete with a status of Success. If one or more requests complete with a status of Error, then the status of the stage is Error. For a stage's status to be Warning, one or more of the requests must have a status of Warning and no request may have a status of Error.

NEW QUESTION: 2

To open a period without going into the Setup and Maintenance work area you can maintain the period statuses of ledger from the _____ work area.

- A.** General Ledger Journals
- B.** Account Monitoring
- C.** Process Monitoring
- D.** Manage Revaluations

Answer: A

Explanation:

Manage Allocations and Period Entries is a manual task in the implementation project. Use the Allocation Manager to create allocations and other formulaic journal templates for generating periodic journal entries automatically. Base formulas on multiple criteria. You must perform an external procedure outside the Setup and Maintenance work area to complete this task. In order to setup your allocations rules, navigate to the Journals work area and click the Create Allocations Rules task from the Tasks pane. This task navigates you to Allocation Manager, a framework that enables you to define your allocation rules and formulas using a graphical interface and intuitive step-by-step wizards.
