A. ping
B. ls
C. top
D. df
E. netstat
F. tcpdump
Answer: A,E,F

NEW QUESTION: 3
A company maintains an Azure storage account. The storage account uses blobs and tables. Customers access the storage account by using shared access signatures (SASs).
You need to monitor the usage of the storage services. You need to do the following:
Which three data analysis tasks should you perform? Each correct answer presents part of the solution.
A. Use data from the logs of the storage services to calculate aggregate server latency across

individual requests. Determine whether the results of this calculation indicate that the Azure Storage service is in compliance with the SLA.
B. Analyze the logs of the storage services to find records of operations that are marked as billable.
C. Analyze the logs of the storage services to determine which storage services were inaccessible because of permissions issues.
D. Review the Azure documentation to determine which storage operations are billable. Then find records of those operations in the logs of the storage services.
E. Correlate the data logged from the storage service with the permissions to store data in the individual blobs and containers. Determine which storage services were inaccessible because of permissions issues.
F. Use data from the logs of the storage services to find individual storage access attempts that do not comply with the SLA.
Answer: A,C,D
