NEW QUESTION: 2

Scenario: A Citrix Administrator is configuring SNMP management on the NetScaler to receive alerts when something fails. The administrator was confident that the Manager, Alarms and SNMP Traps were configured correctly. The following week, there was a NetScaler-related outage and the administrator did NOT get any alerts.

What could be the reason for the SNMP alert failure?

- A. The NetScaler only has Standard licensing.
- B. The NetScaler is configured for SNMP version 1.
- C. The Community Name was NOT configured on the NetScaler SNMP Trap Destination settings.
- D. The NetScaler Application Firewall is blocking the alerts from going out.

Answer: C

NEW QUESTION: 3

Explanation:

Constraint States (continued)

DISABLE NOVALIDATE: New as well as existing data may not conform to the constraint because it is not checked. This is often used when the data is from an already validated source and the table is read-only, so no new data is being entered into the table. NOVALIDATE is used in data warehousing situations where the data has already been cleaned up. No validation is needed, thereby saving time.

DISABLE VALIDATE: If a constraint is in this state, modification of the constrained columns is not allowed because it would be inconsistent to validate the existing data and then allow unchecked data to enter the table. This is often used when existing data must be validated but not modified and when the index is not otherwise needed for performance.

ENABLE NOVALIDATE: New data conforms to the constraint, but existing data is in an unknown state.

This is frequently used when it is known that clean and conforming data exists in the table so there is no need for validation. However, new violations are not allowed to enter the system.

ENABLE VALIDATE: Both new and existing data conform to the constraint. This is the typical and default state of a constraint.

NEW QUESTION: 4

A customer wants to expand an existing 3PAR array with additional drives. The array is sending remote support data, but is not configured in HPE InfoSight. Which tool should you use to examine the current array configuration to make balanced drive expansion recommendations to your customer?
