NEW QUESTION: 2

Which Open Replicator mode is used by the RecoverPoint VMAX write splitter?

- A. Cold Pull
- B. Cold Push
- C. Hot Pull
- D. Modified Hot Push

Answer: D

NEW QUESTION: 3

On which interface can port security be configured?

- A. dynamic access point
- B. static trunk ports
- C. EtherChannel port group
- D. destination port for SPAN

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Port Security and Port Types

You can configure port security only on Layer 2 interfaces. Details about port security and different types of interfaces or ports are as follows:

Access ports--You can configure port security on interfaces that you have configured as Layer 2 access

ports. On an access port, port security applies only to the access VLAN.

Trunk ports--You can configure port security on interfaces that you have configured as Layer 2 trunk

ports. VLAN maximums are not useful for access ports. The device allows VLAN maximums only for VLANs associated with the trunk port.

SPAN ports--You can configure port security on SPAN source ports but not on SPAN destination ports.

Ethernet Port Channels--Port security is not supported on Ethernet port channels.
