#### **NEW QUESTION: 4**

You have a server named Server1 that runs Windows Server 2012.

You download and install the Microsoft Online Backup Service Agent on Server1.

You need to ensure that you can configure an online backup from Windows Server Backup.

What should you do first?

- A. From Windows Server Backup, run the Register Server Wizard.
- B. From a command prompt, run wbadmin.exe enable backup.
- C. From Computer Management, add the Server1 computer account to the Backup Operators group.
- D. From the Services console, modify the Log On settings of the Microsoft Online Backup Service Agent.

**Answer: A**

Explanation:

Download and install the Windows Azure Online Backup Agent After you create an account on the Windows Azure Online Backup website, you can download the Windows Azure Online Backup Agent and install it locally. An Online Backup node then appears in the navigation pane of the Windows Server Backup console, as shown in Figure 12

If you prefer, you can also configure online backups from the Windows Azure Online Backup console, which

becomes available after you install the agent. The Windows Azure Online Backup console provides exactly

the same set of options as the Online Backup node in the Windows Server Backup console.

Register server

The next step is to register your server. Registering a server enables you to perform backups from that

same server only. (Remember this point for the exam.) To register the server, from the Actions menu,

select Register Server.

The Register Server Wizard includes two configuration steps. First, you are given an opportunity to specify

a proxy server if desired. Second, you are asked to provide a passphrase that will be used to encrypt your

backup data and a location to save this passphrase in a file. You need to provide this passphrase when you

perform a restore operation, so it's essential that you don't lose it. (Microsoft doesn't maintain a copy of your

passphrase.) A Generate Passphrase option creates the passphrase for you automatically.

After you register a server, new options for Online Backup appear in the Actions pane, including Schedule Backup, Recover Data, Change Properties, and Unregister Server.
