### NEW QUESTION: 1

- A. Option D
- B. Option B
- C. Option C
- D. Option A

**Answer: A**

Explanation:

Explanation

Since the issue is occurring after the new feature has been added, it could be relevant to the new feature.

Enabling Cloudtrail will just monitor all the API calls of all services and will not benefit the cause.

The monitoring of CPU utilization will just reverify that there is an issue but will not help pinpoint the issue.

The Elastic Load Balancer logs will also just reverify that there is an issue but will not help pinpoint the issue.

レイヤ2スイッチインターフェイスのSTP状態の遷移順序とは何ですか？

**A.** ブロッキング、リスニング、学習、フォワーディング、無効

**B.** リスニング、ブロッキング、学習、フォワーディング、無効

**C.** フォワーディング、リスニング、学習、ブロッキング、無効

**D.** リスニング、学習、ブロッキング、フォワーディング、無効

**Answer: A**

Explanation:

Explanation

STP switch port states:

+ Blocking - A port that would cause a switching loop if it were active. No user data is sent or received over a

blocking port, but it may go into forwarding mode if the other links in use fail and the spanning tree algorithm

determines the port may transition to the forwarding state. BPDU data is still received in blocking state.

Prevents the use of looped paths.

+ Listening - The switch processes BPDUs and awaits possible new information that would cause it to return

to the blocking state. It does not populate the MAC address table and it does not forward frames.

+ Learning - While the port does not yet forward frames it does learn source addresses from frames received

and adds them to the filtering database (switching database). It populates the MAC address table, but does not

forward frames.

+ Forwarding - A port receiving and sending data, normal operation. STP still monitors incoming BPDUs that

would indicate it should return to the blocking state to prevent a loop.

+ Disabled - Not strictly part of STP, a network administrator can manually disable a port
