Our experts have many years' experience in this particular line of business, together with meticulous and professional attitude towards jobs, We have PDF version OGA-031 exam guides, which are printable format.

Besides, we offer many new updates of OGA-031 test torrent to your mailbox freely for one year long, which are just some gifts and benefits we offer, and we also offer some discounts for you.

So our company attaches great importance to quality, If you get one certification successfully with help of our OGA-031 exam prep materials you can find a high-salary job **OGA-031 Valid Test Notes** in more than one hundred countries worldwide where these certifications are available.

At the same time, a high quality product needs more efforts than the ordinary one, And the benefit from our OGA-031 learning guide is enormous for your career enhancement.

This certification demonstrates candidates' credentials and capacity.

NEW QUESTION: 1

Your company wants to track whether someone is present in a meeting room reserved for a scheduled meeting. There are 1000 meeting rooms across 5 offices on 3 continents. Each room is equipped with a motion sensor that reports its status every second. The data from the motion detector includes only a sensor ID and several different discrete items of information. Analysts will use this data, together with information about account owners and office locations.

Which database type should you use?

- A. Blobstore
- B. Relational
- C. Flat file
- D. NoSQL

Answer: D

Explanation:

Explanation/Reference:

Explanation:

Relational databases were not designed to cope with the scale and agility challenges that face modern applications, nor were they built to take advantage of the commodity storage and processing power available today.

NoSQL fits well for:

Developers are working with applications that create massive volumes of new, rapidly changing data

types - structured, semi-structured, unstructured and polymorphic data.

Incorrect Answers:

D: The Blobstore API allows your application to serve data objects, called blobs, that are much larger than the size allowed for objects in the Datastore service. Blobs are useful for serving large files, such as video or image files, and for allowing users to upload large data files.

NEW QUESTION: 2

Which two server tasks are responsible for keeping view indexes and full-text indexes up-to-date? (Choose two.)

- A. View
 - B. Indexer
 - C. Update
 - D. Index
 - E. Updall
- Answer: C,E**

NEW QUESTION: 3

Which feature of vSphere networking protects hosts from losing connection to vCenter Server as a result of misconfiguration of the management network?

- A. Private VLAN
- B. Health Check
- C. NIC Teaming
- D. Rollback

Answer: D

Explanation:

By rolling configuration changes back, vSphere protects hosts from losing connection to vCenter Server as a result from misconfiguration of the management network.

NEW QUESTION: 4

Given:

```
import java.util.*;
public class SearchText {
public static void main(String[] args) {
Object[] array1 = new Object[3];
array1[0] = "foo"; array1[0] = 1;
array1[0] = 'a';
int index = Arrays.binarySearch(array1, "bar");
System.out.println(index);
}
}
```

What is the result?

- A. 0
- B. An exception is thrown at runtime
- C. 1
- D. Compilation fails
- E. - 1

Answer: B

Explanation:

The code compiles fine.

An exception is thrown at runtime due to data type comparison mismatch:

Exception in thread "main" java.lang.ClassCastException: java.lang.String cannot be cast to java.lang.Integer

```
at java.lang.Integer.compareTo(Integer.java:52)
at java.util.Arrays.binarySearch0(Arrays.java:1481)
at java.util.Arrays.binarySearch(Arrays.java:1423)
at searchtext.SearchText.main(SearchText.java:22)
```

Note:binarySearch

```
public static int binarySearch(char[] a,  
char key)
```

Searches the specified array of chars for the specified value using the binary search algorithm. The array must be sorted (as by the sort method, above) prior to making this call. If it is not sorted,

the results are undefined. If the array contains multiple elements with the specified value, there is

no guarantee which one will be found.

Parameters:

a - the array to be searched.

key - the value to be searched for.

Returns:

index of the search key, if it is contained in the list; otherwise, $-(\text{insertion point}) - 1$. The insertion

point is defined as the point at which the key would be inserted into the list: the index of the first element greater than the key, or `list.size()`, if all elements in the list are less than the specified key. Note that this guarantees that the return value will be ≥ 0 if and only if the key is found.
